FORGET THE FEAR OF DROPPINGS

NUISANCE CAUSED BY BIRDS :

Pigeons are inoffensive and lovable creatures that soothe us and keep us company in deary inner cities. Feeding the pigeons is a joy and a comfort to young and old a like. some even say it is an essential form of self expression. Nesting prevention is the only sure and effective way to reduce or eliminate pigeon population.

BREEDING

Each nest disabled equals an overall population reduction of 2 to 6 birds per year. The female pigeons have three to four breeds a year & will usually lay two or sometimes three eggs at a time in a nest buildup from debris, food & water contaminated with feces and or contaminated soil they rest on. This helps to create at least 10 to 12 new nests per bird per year. The most effective way to control the pigeon population is to reduce the areas where they roost and breed and deter them from preaching !

NESTING & ROOSTING :

Pigeons roosting and nesting on manmade structures and various protected locations like buildings, parapets and structural ledges, create extensive damage and generate perilous safety situations, unsanitary conditions and serious health hazards with the accumulation of their feces. Generally nest building consists of sticks, stems, leaves, stiff twigs and other debris. Normally, the male select the nesting site like bridge supports, air conditioning unit, windowsills etc. Nesting prevention is the only sure way to reduce, eliminate pigeon population. It is the birth control when you remove the nesting sites and the breeding areas.

DAMAGES & DISEASES :

Nesting Materials in electrical equipment can start fires. On roofs it can clog drains gutters, causing overflow resulting in leaks and, in extreme cases, roof collapses. Pest birds can spread over 60 diseases to humans and animals such as salmonella, histoplasmosis, and meningitis. Dropping-covered walkways can be very slippery, presenting a dangerous potential for "slip and fall" accidents and lawsuits.

Dropping & Nesting materials-related expenses include : cleaning/repair of machinery and structures, repackaging of damaged items, employee time off and liability costs for slip & fall accidents, and more. A negative image is presented to your customers when buildings, signs or walkways become littered with nesting debris and bird droppings.

FORGET THE FEAR OF DROPPINGS

INTRODUCTION OF PIGEON SPIKE

PIGEON SPIKE is very latest in technology which covers all the plus points compared with conventional method. Our research team and knowledgeable consultant have developed the technology for keeping the thought of ultra modern age. The method is widely accepted & performing successfully.

ONE OF THE SUCCESSFUL SITE

PIGEON SPIKE Physical deterrent & exclusion systems have quickly become the products of choice within the Architects, Building contractor & pest control industries.

APPLICATION

| EACH UNIT | ADVANTAGE |
|-----------|----------------------|
| | ★ MADE OF HDPE / LDP |
| | ★ ECONOMICAL / SAFE |
| | ★ NO WEATHER EFFECT |
| | ★ MAINTENANCE FREE |
| | ★ NON-CORROSIVE |
| | ★ EASY REPLACEMENT |

Shade structure, above online production area on regular rusting places, pattern area of pigeon parapet edges, above the dropping places.

TECHNICAL SPECIFICATIONS

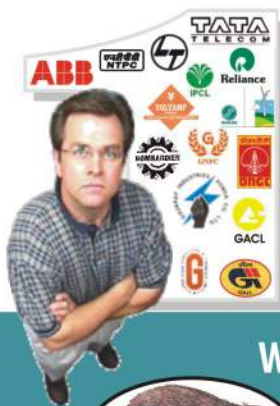

VARIOUS METHODS & COMPARISON WITH BIRDCORNER
